Healthsoft
Dependable. Always.

Healthsoft **ICD-10**
ICD-10 & HIPAA 5010 Compliance Solution

Accelerate to the next level

ICD 10 implementation is not just a superficial change. It has a much deeper impact like the Y2K bug. At Healthsoft, we have the industry expertise and technology solutions to get you moving to the next level.

ICD-10

The International Classification of Diseases (ICD) is founded, maintained, and published by the World Health Organization (WHO), located in Europe. ICD-10 plays a key role in being able to code and classify mortality data from death certificates. It far exceeds its predecessors in the number of codes provided, leading to far more accurate diagnosis and reporting. Reimbursement and quality needs can also be much better met under the new system.

ICD-10 provides enormous opportunities for improving documentation processes for health records with:

- A better coding classification system
- Refinement to financial/reimbursement models
- Improvements in clinical specificity resulting in improvements to patient safety functions
- Better understanding of disease and costs, allowing healthcare providers and others to improve their delivery

HIPAA 5010

The Health Insurance Portability and Accountability Act (HIPAA) is an extensive piece of legislation that requires the standardization of electronic patient health, administrative, and financial data. HIPAA-compliance necessitates the support of a standard set of codes and guidelines defined by the US government.

Good News vs. Bad news

The CMS' (Centers for Medicare and Medicaid Services) stress on upgrading to ICD-10 and HIPAA 5010 is both good news and bad news.

The bad news for institutions and practices at the moment is that they have to implement the measures within the deadlines specified by the government and this comes at a cost, some significant efforts and education.

The good news is that implementation of the new ICD-10

code set and X12 HIPAA 5010 transaction standards is a historic opportunity to upgrade the quality of healthcare data.

Why Healthsoft

At Healthsoft, our full spectrum of testing options will take you from Unit Test to Certification, and once you're in production, you'll use the same guidelines for transaction validation and performance reporting.

We are focused on creating business value that brings in a very domain-specific and technically competent workforce to enable more efficient and effective care delivery and management and quickly adapt to a changing business environment. We offer a full range of consultative services from recognized industry experts and will guide you every step of the way through the migration to ICD-10 and 5010.

For a smooth transition

Healthsoft's solutions already support ICD-10 codes and HIPAA 5010 standards and can ease your transition with partner-by-partner and transaction-by-transaction migration to production.

Our specific support for ICD-10 and HIPAA 5010 and migration includes:

- Analysis: Guideline analysis and migration, edit analysis, data comparison between versions, test data & test scenario generation, code-set management.
- Testing: Partner testing, partner on-boarding and enablement, partner certification, internal system testing.
- Production: Conversion maps for inline data conversion, production data validation, data enrichment.
- Partner and Transaction Management: Transaction visibility, self-service transaction viewing and data correction, transaction analytics, partner compliance and performance monitoring.

This is complemented by

- Advanced guideline comparison to assess the scope of your ICD-10 and 5010 migration efforts.
- Guideline migration service to prepare your business rules for conversion or to build your guidelines from scratch.
- A full range of testing options – from individual file testing to 5010 certification to mass parallel testing of multiple submissions.
- On-screen form-based transaction view to allow for correct transactions.
- Detailed performance reporting and enterprise-wide business analytics database.
- Consultative service engagements for migration with industry-recognized EDI and subject matter experts.

How we get you there

External Beta Testing– Testing early adopters

- Manually test single files from individual partners.
- Mass-parallel testing with full reporting of performance statistics.

Partner Migration Testing– Partner rollout

- Facilitate migration with an online self-testing portal for automated, unattended testing.
- Keep track of testing status with scenario management and partner scorecards.
- Speed partner with the only integrated solution for recruiting, connectivity, certification, testing and promotion to production.

Facilitate New Partners - Analyze partner compliance & performance in production

- The transaction validation engine ensures compliance in your production flow – benchmarked as the fastest of its kind.

Enforce business rules in production

- Get detailed business analysis across lines of business, transaction types and geographic regions.
- Eliminate data latency in your business intelligence reporting with an advanced tool. Analyze performance at any level.

Our team works as yours

Both ICD-10 and X12 5010 will impact processes across your organization. Your teams will need to be educated about the ICD-10 timeline, HIPAA 5010 timeline, establishing organizational structure, changes to your claims system, secure compliance attestation from clearing houses, review process impacts and improved processes. Our experts can help you with all this and more as an extension of your team.

The Healthsoft team is staffed with industry experts with specialized knowledge of healthcare, HIPAA and other standards. We work closely with you to ensure rapid and successful, smooth migration to ICD-10 and 5010.

From initial configuration and setup, to training, education and ongoing support, we offer a full spectrum of services. At each stage of your implementation, you can leverage our expertise to supplement your existing staff in handling spikes and time-critical projects as needed.

About Healthsoft

Healthsoft is an IT solutions provider dedicated to simplifying healthcare. We create solutions to help healthcare providers work faster, smarter and better by building custom process-driven solutions to give our customer a strong IT backbone. Technologies that adapt to your operations, and not the other way around.
